Government of Karnataka
DEPARTMENT OF SCHOOL EDUCATION (PRE-UNIVERSITY)
SECOND YEAR P U C
COMPUTER SCIENCE (NEW SYLLABUS)
List of practical problems - II PU Course
PART – A
Python

1. Write a python program using a function to print n Fibonacci numbers.
2. Write a menu driven program in python to find factorial and sum of natural of n numbers using function.
3. Write a python program using user defined function to calculate interest amount using simple interest method and compound interest method and find the difference of interest amount between the two methods.
4. Write a Python Program to create a text file and to read a text file and display the number of vowels, consonants, uppercase and lowercase characters in the file.
5. Write a python code to find the number of lines, number of words and number of characters in a text file.
6. Write a python program using function to sort the elements of a list using bubble sort method.
7. Write a python program using function to sort the elements of a list using selection sort method.
8. Write a python program using function to sort the elements of a list using insertion sort method.
9. Write a python program using function to search an element in a list using linear search method.
10. Write a python program using function to search an element in a list using binary search method.
11. Write a python program to add and display elements from a stack using list.
12. Write a python program to add and display elements from a queue using list.

PART B
Mysql

Create a table with the following fields and enter 10 records into the table.
Entity Name: marks

Attribute name	Type	Size	Constraints
Rollno	int	5	
Sname	varchar	15	Not null
Lang	int	3	Between 0 and 100
Eng	int	3	Between 0 and 100
Sub1	int	3	Between 0 and 100
Sub2	int	3	Between 0 and 100
Sub3	int	3	Between 0 and 100
Sub4	int	3	Between 0 and 100

1. Create a table from the table.
2. Insert all the records.
3. View the structure of table
4. Add the new attributes total and percentage.
5. Calculate total and percentage of marks for all the students
6. Arrange the students based on percentage of marks from highest to lowest.
7. List all the records

Create a table for house hold Electricity bill with the following fields and enter 10 records.

Entity Name: BESCOM

Attribute name	**Type**	**Size**	**Constraint**
RRNO	varchar	10	Primary key
CNAME	varchar	25	Not null
BDATE	DATE		
UNIT	INT	4	

1. Create a table from the table.
2. Insert all the records.
3. View the structure of table.
4. Add the new attribute billamt.
5. Compute the billamt for each consumer as per the following rules.

MINIMUM Amount Rs. 100
For first 100 units Rs 7.50/Unit
For the above 100 units Rs. 8.50/Unit

6. Display the maximum, minimum and total bill amount.
7. List all the bills generated in a sorted order based on RRNO.

Write a python program to add and display elements from a stack using list.

Create a table with the following details and enter 10 records into the table.

Entity Name: student

Attribute name	**Type**	**Size**	**Constraint**
Rollno	int	5	Primary key
Sname	Varchar	15	Not null
DOB	date		
Gender	char	1	
Combn	varchar	5	
Class	char	6	

1. Create a table
2. Insert all the records
3. View the structure of table.
4. List all the students
5. List the students who are in BASC or CEBA combination.

6. List only the combination by removing duplicate values.
7. List the students alphabetically.
8. List the students alphabetically and class-wise.
9. List the students who born in the month of June of any year.
10. Count the number of students Gender-wise.

Create a table with following fields and enter 10 records into the table.
Entity Name: Library

Attribute name	**Type**	**Size**	**Constraint**
Title	varchar	75	Not null
Author	varchar	60	
Year	int	4	
Category	varchar	25	
Price	float	7,2	
Qty	int	4	

1. Create a table
2. Insert all the records
3. View the structure of table.
4. Add the new attribute Amount.
5. Calculate amount for each book from the library table.
6. List the records of all those books price is between 400 and 900.
7. List all the records.

Write a python program using a function to print n Fibonacci numbers.

Write a menu driven program in python to find factorial and sum of natural of n numbers using function.

Write a python program using user defined function to calculate interest amount using simple interest method and compound interest method and find the difference of interest amount between the two methods.

Write a Python Program to create a text file and to read a text file and display the number of vowels, consonants, uppercase and lowercase characters in the file.

Write a python code to find the number of lines, number of words and number of characters in a text file.

Write a python program using function to sort the elements of a list using bubble sort method.

Write a python program using function to sort the elements of a list using selection sort method.

Write a python program using function to sort the elements of a list using insertion sort method.

Write a python program using function to search an element in a list using linear search method.

Write a python program using function to search an element in a list using binary search method.

Write a python program to add and display elements from a stack using list.

Write a python program to add and display elements from a queue using list.

Write a python program using a function to print n Fibonacci numbers.

Write a menu driven program in python to find factorial and sum of natural of n Numbers using function.

Write a python code to find the number of lines, number of words and number of characters in a text file.

Write a python program to add and display elements from a stack using list.

Create a table with the following fields and enter 10 records into the table.
Entity Name: marks

Attribute name	**Type**	**Size**	**Constraints**
Rollno	int	5	
Sname	varchar	15	Not null
Lang	int	3	Between 0 and 100
Eng	int	3	Between 0 and 100
Sub1	int	3	Between 0 and 100
Sub2	int	3	Between 0 and 100
Sub3	int	3	Between 0 and 100
Sub4	int	3	Between 0 and 100

1. Create a table from the table.
2. Insert all the records.
3. View the structure of table
4. Add the new attributes total and percentage.
5. Calculate total and percentage of marks for all the students
6. Arrange the students based on percentage of marks from highest to lowest.
7. List all the records

Create a table for house hold Electricity bill with the following fields and enter 10 records.
Entity Name: BESCOM

Attribute name	**Type**	**Size**	**Constraint**
RRNO	varchar	10	Primary key
CNAME	varchar	25	Not null
BDATE	DATE		
UNIT	INT	4	

1. Create a table from the table.
2. Insert all the records.
3. View the structure of table.
4. Add the new attribute billamt.
5. Compute the billamt for each consumer as per the following rules.

MINIMUM Amount Rs. 100
For first 100 units Rs 7.50/Unit
For the above 100 units Rs. 8.50/Unit

6. Display the maximum, minimum and total bill amount.
7. List all the bills generated in a sorted order based on RRNO.

Write a python program using a function to print n Fibonacci numbers.

Write a menu driven program in python to find factorial and sum of natural of n numbers using function.

Create a table with the following details and enter 10 records into the table.
Entity Name: student

Attribute name	Type	Size	Constraint
Rollno	int	5	Primary key
Sname	Varchar	15	Not null
DOB	date		
Gender	char	1	
Combn	varchar	5	
Class	char	6	

1. Create a table
2. Insert all the records
3. View the structure of table.
4. List all the students
5. List the students who are in BASC or CEBA combination.
6. List only the combination by removing duplicate values.
7. List the students alphabetically.
8. List the students alphabetically and class-wise.
9. List the students who born in the month of June of any year.
10. Count the number of students Gender-wise.

Create a table with following fields and enter 10 records into the table.
Entity Name: Library

Attribute name	Type	Size	Constraint
Title	varchar	75	Not null
Author	varchar	60	
Year	int	4	
Category	varchar	25	
Price	float	7,2	
Qty	int	4	

1. Create a table
2. Insert all the records
3. View the structure of table.
4. Add the new attribute Amount.
5. Calculate amount for each book from the library table.
6. List the records of all those books price is between 400 and 900.
7. List all the records.

Write a Python Program to create a text file and to read a text file and display the number of vowels, consonants, uppercase and lowercase characters in the file.

Write a python code to find the number of lines, number of words and number of characters in a text file.

Create a table with the following fields and enter 10 records into the table.
Entity Name: marks

Attribute name	Type	Size	Constraints
Rollno	int	5	
Sname	varchar	15	Not null
Lang	int	3	Between 0 and 100
Eng	int	3	Between 0 and 100
Sub1	int	3	Between 0 and 100
Sub2	int	3	Between 0 and 100
Sub3	int	3	Between 0 and 100
Sub4	int	3	Between 0 and 100

1. Create a table from the table.
2. Insert all the records.
3. View the structure of table
4. Add the new attributes total and percentage.
5. Calculate total and percentage of marks for all the students
6. Arrange the students based on percentage of marks from highest to lowest.
7. List all the records

Create a table for house hold Electricity bill with the following fields and enter 10 records.
Entity Name: BESCOM

Attribute name	Type	Size	Constraint
RRNO	varchar	10	Primary key
CNAME	varchar	25	Not null
BDATE	DATE		
UNIT	INT	4	

1. Create a table from the table.
2. Insert all the records.
3. View the structure of table.
4. Add the new attribute billamt.
5. Compute the billamt for each consumer as per the following rules.

MINIMUM Amount Rs. 100
For first 100 units Rs 7.50/Unit
For the above 100 units Rs. 8.50/Unit

6. Display the maximum, minimum and total bill amount.
7. List all the bills generated in a sorted order based on RRNO.

Write a python program using user defined function to calculate interest amount using simple interest method and compound interest method and find the difference of interest amount between the two methods.

Create a table with the following details and enter 10 records into the table.
Entity Name: student

Attribute name	Type	Size	Constraint
Rollno	int	5	Primary key
Sname	Varchar	15	Not null
DOB	date		
Gender	char	1	
Combn	varchar	5	
Class	char	6	

1. Create a table
2. Insert all the records
3. View the structure of table.
4. List all the students
5. List the students who are in BASC or CEBA combination.
6. List only the combination by removing duplicate values.
7. List the students alphabetically.
8. List the students alphabetically and class-wise.
9. List the students who born in the month of June of any year.
10. Count the number of students Gender-wise.

Create a table with following fields and enter 10 records into the table.
Entity Name: Library

Attribute name	Type	Size	Constraint
Title	varchar	75	Not null
Author	varchar	60	
Year	int	4	
Category	varchar	25	
Price	float	7,2	
Qty	int	4	

1. Create a table
2. Insert all the records
3. View the structure of table.
4. Add the new attribute Amount.
5. Calculate amount for each book from the library table.
6. List the records of all those books price is between 400 and 900.
7. List all the records.

Write a menu driven program in python to find factorial and sum of natural of n numbers using function.

Write a python program to add and display elements from a stack using list.

Create a table with the following fields and enter 10 records into the table.
Entity Name: marks

Attribute name	**Type**	**Size**	**Constraints**
Rollno	int	5	
Sname	varchar	15	Not null
Lang	int	3	Between 0 and 100
Eng	int	3	Between 0 and 100
Sub1	int	3	Between 0 and 100
Sub2	int	3	Between 0 and 100
Sub3	int	3	Between 0 and 100
Sub4	int	3	Between 0 and 100

1. Create a table from the table.
2. Insert all the records.
3. View the structure of table
4. Add the new attributes total and percentage.
5. Calculate total and percentage of marks for all the students
6. Arrange the students based on percentage of marks from highest to lowest.
7. List all the records

Create a table for house hold Electricity bill with the following fields and enter 10 records.
Entity Name: BESCOM

Attribute name	**Type**	**Size**	**Constraint**
RRNO	varchar	10	Primary key
CNAME	varchar	25	Not null
BDATE	DATE		
UNIT	INT	4	

1. Create a table from the table.
2. Insert all the records.
3. View the structure of table.
4. Add the new attribute billamt.
5. Compute the billamt for each consumer as per the following rules.

MINIMUM Amount Rs. 100
For first 100 units Rs 7.50/Unit
For the above 100 units Rs. 8.50/Unit

6. Display the maximum, minimum and total bill amount.
7. List all the bills generated in a sorted order based on RRNO.

Write a Python Program to create a text file and to read a text file and display the number of vowels, consonants, uppercase and lowercase characters in the file.

Write a python program to add and display elements from a queue using list.

Create a table with the following details and enter 10 records into the table.
Entity Name: student

Attribute name	Type	Size	Constraint
Rollno	int	5	Primary key
Sname	Varchar	15	Not null
DOB	date		
Gender	char	1	
Combn	varchar	5	
Class	char	6	

1. Create a table
2. Insert all the records
3. View the structure of table.
4. List all the students
5. List the students who are in BASC or CEBA combination.
6. List only the combination by removing duplicate values.
7. List the students alphabetically.
8. List the students alphabetically and class-wise.
9. List the students who born in the month of June of any year.
10. Count the number of students Gender-wise.

Create a table with following fields and enter 10 records into the table.
Entity Name: Library

Attribute name	Type	Size	Constraint
Title	varchar	75	Not null
Author	varchar	60	
Year	int	4	
Category	varchar	25	
Price	float	7,2	
Qty	int	4	

1. Create a table
2. Insert all the records
3. View the structure of table.
4. Add the new attribute Amount.
5. Calculate amount for each book from the library table.
6. List the records of all those books price is between 400 and 900.
7. List all the records.

Write a python program using function to sort the elements of a list using bubble sort method.

Write a python program using function to sort the elements of a list using selection sort method.

Create a table with the following fields and enter 10 records into the table.
Entity Name: marks

Attribute name	**Type**	**Size**	**Constraints**
Rollno	int	5	
Sname	varchar	15	Not null
Lang	int	3	Between 0 and 100
Eng	int	3	Between 0 and 100
Sub1	int	3	Between 0 and 100
Sub2	int	3	Between 0 and 100
Sub3	int	3	Between 0 and 100
Sub4	int	3	Between 0 and 100

1. Create a table from the table.
2. Insert all the records.
3. View the structure of table
4. Add the new attributes total and percentage.
5. Calculate total and percentage of marks for all the students
6. Arrange the students based on percentage of marks from highest to lowest.
7. List all the records

Create a table for house hold Electricity bill with the following fields and enter 10 records.
Entity Name: BESCOM

Attribute name	**Type**	**Size**	**Constraint**
RRNO	varchar	10	Primary key
CNAME	varchar	25	Not null
BDATE	DATE		
UNIT	INT	4	

1. Create a table from the table.
2. Insert all the records.
3. View the structure of table.
4. Add the new attribute billamt.
5. Compute the billamt for each consumer as per the following rules.

MINIMUM Amount Rs. 100
For first 100 units Rs 7.50/Unit
For the above 100 units Rs. 8.50/Unit

6. Display the maximum, minimum and total bill amount.
7. List all the bills generated in a sorted order based on RRNO.

Write a python program to add and display elements from a stack using list.

Write a python program using function to sort the elements of a list using selection sort method.

Create a table with the following details and enter 10 records into the table.
Entity Name: student

Attribute name	Type	Size	Constraint
Rollno	int	5	Primary key
Sname	Varchar	15	Not null
DOB	date		
Gender	char	1	
Combn	varchar	5	
Class	char	6	

11. Create a table
12. Insert all the records
13. View the structure of table.
14. List all the students
15. List the students who are in BASC or CEBA combination.
16. List only the combination by removing duplicate values.
17. List the students alphabetically.
18. List the students alphabetically and class-wise.
19. List the students who born in the month of June of any year.
20. Count the number of students Gender-wise.

Create a table with following fields and enter 10 records into the table.
Entity Name: Library

Attribute name	Type	Size	Constraint
Title	varchar	75	Not null
Author	varchar	60	
Year	int	4	
Category	varchar	25	
Price	float	7,2	
Qty	int	4	

8. Create a table
9. Insert all the records
10. View the structure of table.
11. Add the new attribute Amount.
12. Calculate amount for each book from the library table.
13. List the records of all those books price is between 400 and 900.
14. List all the records.

Write a menu driven program in python to find factorial and sum of natural of n numbers using function.

Write a python code to find the number of lines, number of words and number of characters in a text file.

Create a table with the following fields and enter 10 records into the table.
Entity Name: marks

Attribute name	**Type**	**Size**	**Constraints**
Rollno	int	5	
Sname	varchar	15	Not null
Lang	int	3	Between 0 and 100
Eng	int	3	Between 0 and 100
Sub1	int	3	Between 0 and 100
Sub2	int	3	Between 0 and 100
Sub3	int	3	Between 0 and 100
Sub4	int	3	Between 0 and 100

1. Create a table from the table.
2. Insert all the records.
3. View the structure of table
4. Add the new attributes total and percentage.
5. Calculate total and percentage of marks for all the students
6. Arrange the students based on percentage of marks from highest to lowest.
7. List all the records

Create a table for house hold Electricity bill with the following fields and enter 10 records.
Entity Name: BESCOM

Attribute name	**Type**	**Size**	**Constraint**
RRNO	varchar	10	Primary key
CNAME	varchar	25	Not null
BDATE	DATE		
UNIT	INT	4	

1. Create a table from the table.
2. Insert all the records.
3. View the structure of table.
4. Add the new attribute billamt.
5. Compute the billamt for each consumer as per the following rules.

MINIMUM Amount Rs. 100
For first 100 units Rs 7.50/Unit
For the above 100 units Rs. 8.50/Unit

6. Display the maximum, minimum and total bill amount.
7. List all the bills generated in a sorted order based on RRNO.

Write a python program using function to sort the elements of a list using insertion sort method.

Write a python program to add and display elements from a queue using list.

Create a table with the following details and enter 10 records into the table.
Entity Name: student

Attribute name	Type	Size	Constraint
Rollno	int	5	Primary key
Sname	Varchar	15	Not null
DOB	date		
Gender	char	1	
Combn	varchar	5	
Class	char	6	

1. Create a table
2. Insert all the records
3. View the structure of table.
4. List all the students
5. List the students who are in BASC or CEBA combination.
6. List only the combination by removing duplicate values.
7. List the students alphabetically.
8. List the students alphabetically and class-wise.
9. List the students who born in the month of June of any year.
10. Count the number of students Gender-wise.

Create a table with following fields and enter 10 records into the table.
Entity Name: Library

Attribute name	Type	Size	Constraint
Title	varchar	75	Not null
Author	varchar	60	
Year	int	4	
Category	varchar	25	
Price	float	7,2	
Qty	int	4	

1. Create a table
2. Insert all the records
3. View the structure of table.
4. Add the new attribute Amount.
5. Calculate amount for each book from the library table.
6. List the records of all those books price is between 400 and 900.
7. List all the records.

Write a python program using function to search an element in a list using linear search method.

Write a python program using function to search an element in a list using binary search method.

Create a table with the following fields and enter 10 records into the table.
Entity Name: marks

Attribute name	**Type**	**Size**	**Constraints**
Rollno	int	5	
Sname	varchar	15	Not null
Lang	int	3	Between 0 and 100
Eng	int	3	Between 0 and 100
Sub1	int	3	Between 0 and 100
Sub2	int	3	Between 0 and 100
Sub3	int	3	Between 0 and 100
Sub4	int	3	Between 0 and 100

1. Create a table from the table.
2. Insert all the records.
3. View the structure of table
4. Add the new attributes total and percentage.
5. Calculate total and percentage of marks for all the students
6. Arrange the students based on percentage of marks from highest to lowest.
7. List all the records

Create a table for house hold Electricity bill with the following fields and enter 10 records.
Entity Name: BESCOM

Attribute name	**Type**	**Size**	**Constraint**
RRNO	varchar	10	Primary key
CNAME	varchar	25	Not null
BDATE	DATE		
UNIT	INT	4	

1. Create a table from the table.
2. Insert all the records.
3. View the structure of table.
4. Add the new attribute billamt.
5. Compute the billamt for each consumer as per the following rules.

MINIMUM Amount Rs. 100
For first 100 units Rs 7.50/Unit
For the above 100 units Rs. 8.50/Unit

6. Display the maximum, minimum and total bill amount.
7. List all the bills generated in a sorted order based on RRNO.

Write a python program to add and display elements from a stack using list.

Write a python program to add and display elements from a queue using list.

Create a table with the following details and enter 10 records into the table.
Entity Name: student

Attribute name	Type	Size	Constraint
Rollno	int	5	Primary key
Sname	Varchar	15	Not null
DOB	date		
Gender	char	1	
Combn	varchar	5	
Class	char	6	

1. Create a table
2. Insert all the records
3. View the structure of table.
4. List all the students
5. List the students who are in BASC or CEBA combination.
6. List only the combination by removing duplicate values.
7. List the students alphabetically.
8. List the students alphabetically and class-wise.
9. List the students who born in the month of June of any year.
10. Count the number of students Gender-wise.

Create a table with following fields and enter 10 records into the table.
Entity Name: Library

Attribute name	Type	Size	Constraint
Title	varchar	75	Not null
Author	varchar	60	
Year	int	4	
Category	varchar	25	
Price	float	7,2	
Qty	int	4	

1. Create a table
2. Insert all the records
3. View the structure of table.
4. Add the new attribute Amount.
5. Calculate amount for each book from the library table.
6. List the records of all those books price is between 400 and 900.
7. List all the records.

Write a menu driven program in python to find factorial and sum of natural of n numbers using function.

Write a Python Program to create a text file and to read a text file and display the number of vowels, consonants, uppercase and lowercase characters in the file.

Create a table with the following fields and enter 10 records into the table.
Entity Name: marks

Attribute name	**Type**	**Size**	**Constraints**
Rollno	int	5	
Sname	varchar	15	Not null
Lang	int	3	Between 0 and 100
Eng	int	3	Between 0 and 100
Sub1	int	3	Between 0 and 100
Sub2	int	3	Between 0 and 100
Sub3	int	3	Between 0 and 100
Sub4	int	3	Between 0 and 100

1. Create a table from the table.
2. Insert all the records.
3. View the structure of table
4. Add the new attributes total and percentage.
5. Calculate total and percentage of marks for all the students
6. Arrange the students based on percentage of marks from highest to lowest.
7. List all the records

Create a table for house hold Electricity bill with the following fields and enter 10 records.
Entity Name: BESCOM

Attribute name	**Type**	**Size**	**Constraint**
RRNO	varchar	10	Primary key
CNAME	varchar	25	Not null
BDATE	DATE		
UNIT	INT	4	

1. Create a table from the table.
2. Insert all the records.
3. View the structure of table.
4. Add the new attribute billamt.
5. Compute the billamt for each consumer as per the following rules.

MINIMUM Amount Rs. 100
For first 100 units Rs 7.50/Unit
For the above 100 units Rs. 8.50/Unit

6. Display the maximum, minimum and total bill amount.
7. List all the bills generated in a sorted order based on RRNO.

Write a python program using user defined function to calculate interest amount using simple interest method and compound interest method and find the difference of interest amount between the two methods.

Create a table with the following details and enter 10 records into the table.
Entity Name: student

Attribute name	Type	Size	Constraint
Rollno	int	5	Primary key
Sname	Varchar	15	Not null
DOB	date		
Gender	char	1	
Combn	varchar	5	
Class	char	6	

1. Create a table
2. Insert all the records
3. View the structure of table.
4. List all the students
5. List the students who are in BASC or CEBA combination.
6. List only the combination by removing duplicate values.
7. List the students alphabetically.
8. List the students alphabetically and class-wise.
9. List the students who born in the month of June of any year.
10. Count the number of students Gender-wise.

Create a table with following fields and enter 10 records into the table.
Entity Name: Library

Attribute name	Type	Size	Constraint
Title	varchar	75	Not null
Author	varchar	60	
Year	int	4	
Category	varchar	25	
Price	float	7,2	
Qty	int	4	

1. Create a table
2. Insert all the records
3. View the structure of table.
4. Add the new attribute Amount.
5. Calculate amount for each book from the library table.
6. List the records of all those books price is between 400 and 900.
7. List all the records.

Write a Python Program to create a text file and to read a text file and display the number of vowels, consonants, uppercase and lowercase characters in the file.

Write a python program to add and display elements from a stack using list.

Create a table with the following fields and enter 10 records into the table.
Entity Name: marks

Attribute name	Type	Size	Constraints
Rollno	int	5	
Sname	varchar	15	Not null
Lang	int	3	Between 0 and 100
Eng	int	3	Between 0 and 100
Sub1	int	3	Between 0 and 100
Sub2	int	3	Between 0 and 100
Sub3	int	3	Between 0 and 100
Sub4	int	3	Between 0 and 100

1. Create a table from the table.
2. Insert all the records.
3. View the structure of table
4. Add the new attributes total and percentage.
5. Calculate total and percentage of marks for all the students
6. Arrange the students based on percentage of marks from highest to lowest.
7. List all the records

Create a table for house hold Electricity bill with the following fields and enter 10 records.
Entity Name: BESCOM

Attribute name	Type	Size	Constraint
RRNO	varchar	10	Primary key
CNAME	varchar	25	Not null
BDATE	DATE		
UNIT	INT	4	

1. Create a table from the table.
2. Insert all the records.
3. View the structure of table.
4. Add the new attribute billamt.
5. Compute the billamt for each consumer as per the following rules.

MINIMUM Amount Rs. 100
For first 100 units Rs 7.50/Unit
For the above 100 units Rs. 8.50/Unit

6. Display the maximum, minimum and total bill amount.
7. List all the bills generated in a sorted order based on RRNO.

Write a python program using user defined function to calculate interest amount using simple interest method and compound interest method and find the difference of interest amount between the two methods.

Create a table with the following details and enter 10 records into the table.
Entity Name: student

Attribute name	Type	Size	Constraint
Rollno	int	5	Primary key
Sname	Varchar	15	Not null
DOB	date		
Gender	char	1	
Combn	varchar	5	
Class	char	6	

11. Create a table
12. Insert all the records
13. View the structure of table.
14. List all the students
15. List the students who are in BASC or CEBA combination.
16. List only the combination by removing duplicate values.
17. List the students alphabetically.
18. List the students alphabetically and class-wise.
19. List the students who born in the month of June of any year.
20. Count the number of students Gender-wise.

Create a table with following fields and enter 10 records into the table.
Entity Name: Library

Attribute name	Type	Size	Constraint
Title	varchar	75	Not null
Author	varchar	60	
Year	int	4	
Category	varchar	25	
Price	float	7,2	
Qty	int	4	

8. Create a table
9. Insert all the records
10. View the structure of table.
11. Add the new attribute Amount.
12. Calculate amount for each book from the library table.
13. List the records of all those books price is between 400 and 900.
14. List all the records.

Write a menu driven program in python to find factorial and sum of natural of n numbers using function.

Write a Python Program to create a text file and to read a text file and display the number of vowels, consonants, uppercase and lowercase characters in the file.
